

Azure to Terraform Migration – Multi Agent AI Architecture

Azure to Terraform Migration – Agentic AI Architecture
Orchestrator and Assessment Agents

Microsoft Foundry Sequential Workflow

Sequential Workflow implemented as code first approach and that will expose as api and integrate with UI/UX.

aztf-sequential-wf.py

aztf-orchestrator-v1 (azure foundry agent)
Passing dynamic prompt- **agent-prompts.yaml**

Orchestrator Agent

Passing the input/context to Assessment Agent

LLM Reasoning Engine

aztf-assessment-v1 (azure foundry agent)
Passing dynamic prompt- **agent-prompts.yaml**

Assessment Agent

Receive the dynamic prompt from orchestrator agent

aztf-assessment-v1 (azure foundry agent)
Call the MCP Tool and RUN the python script

Generate Azure Subscription assessment report with proper identification of managed and reference resource details RG wise and uploading in storage account container.

Assessment-repot.html

- Node.js 18+
- PowerShell: 7
- Azure CLI: Latest
- Python:3.8+
- aztfexport

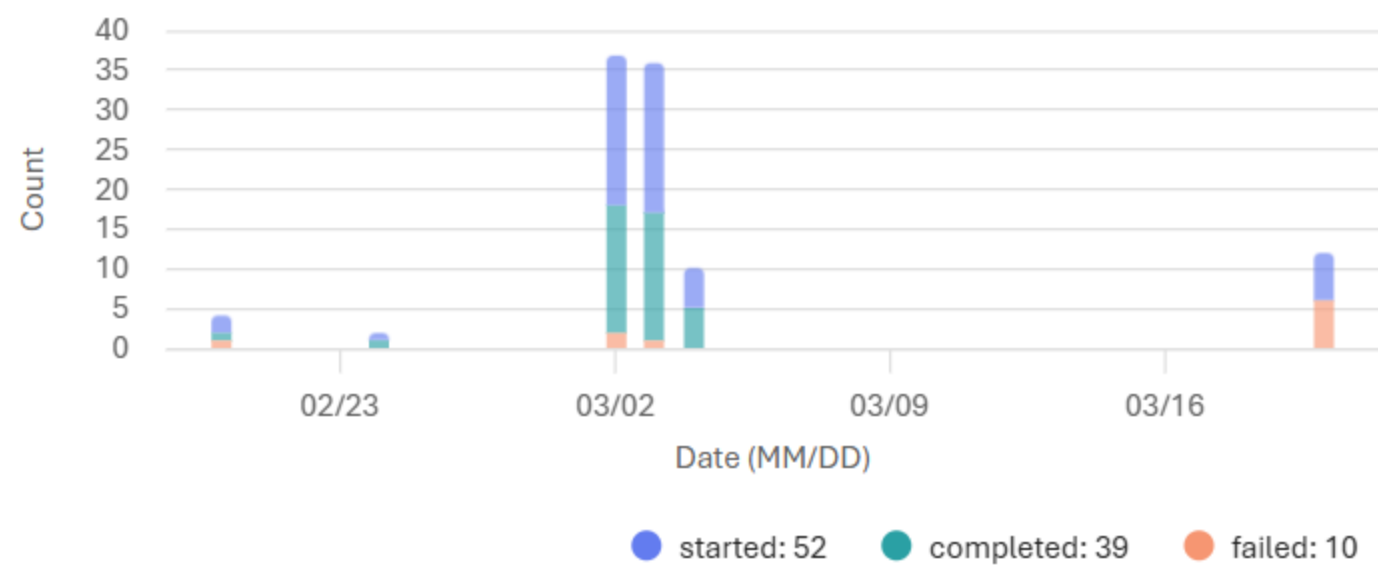

Operational metrics

Track changes in operational metrics, highlighting the largest increases and decreases across agent activity, throughput, escalation ratios, and error rates.

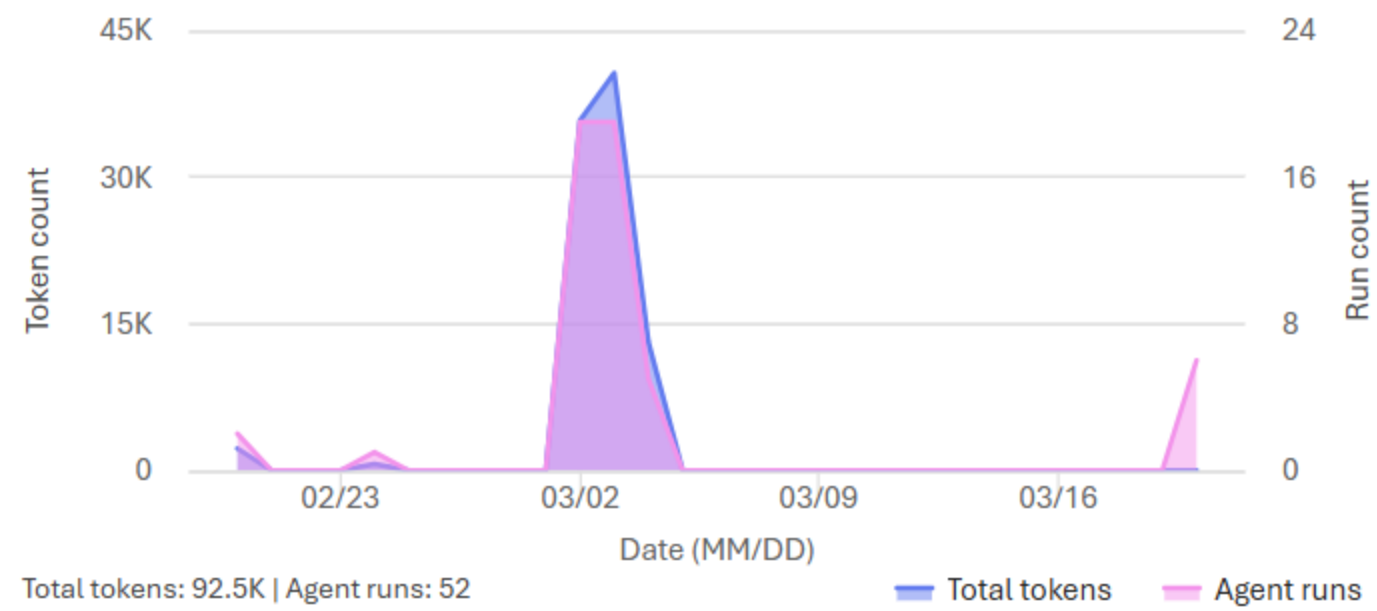

Agent runs

Shows how many times the agent was called

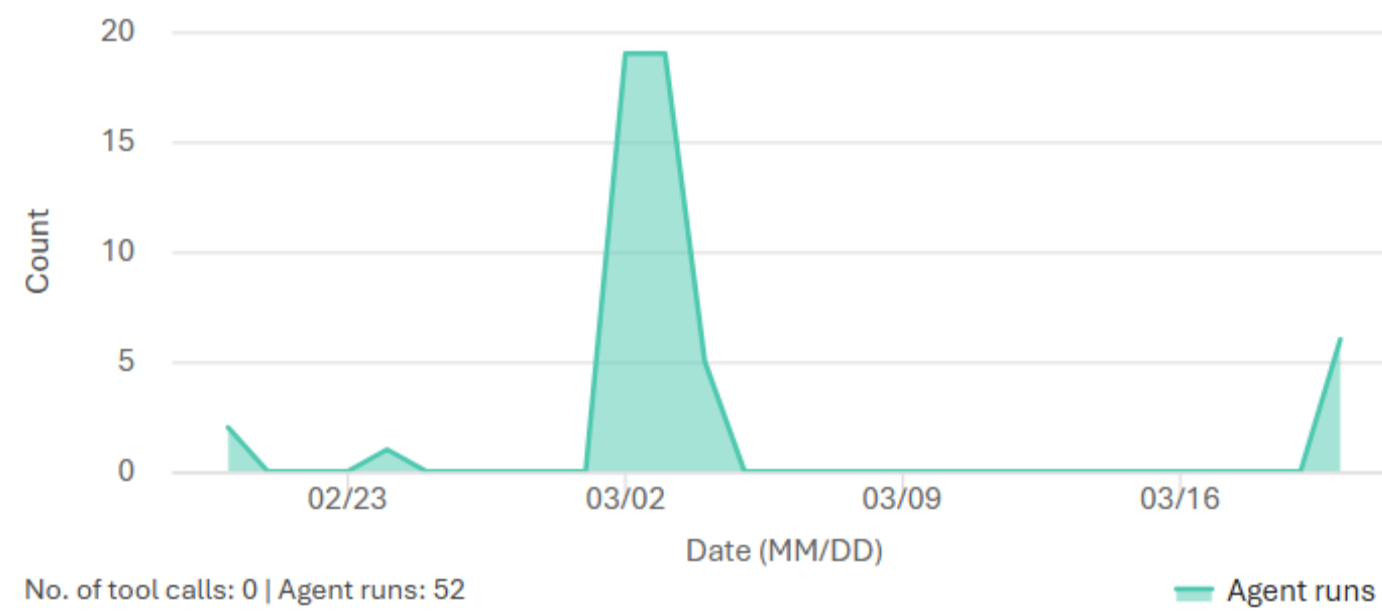

Runs and token metrics

Shows how often the agent was called and how many tokens were consumed

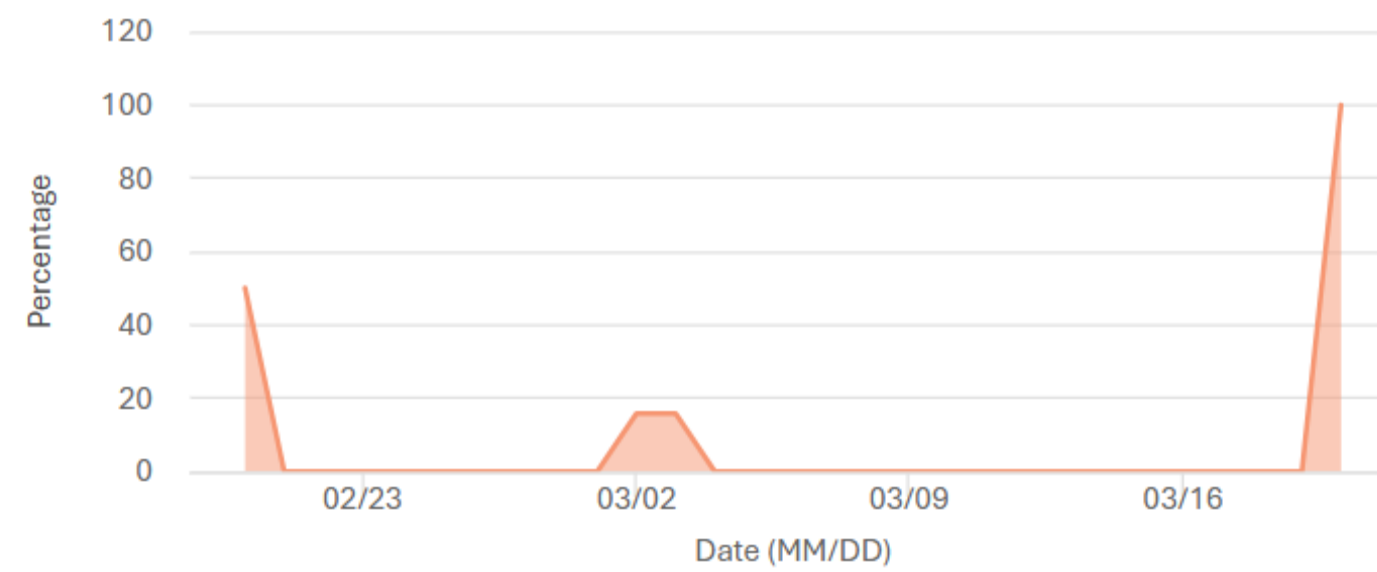

Tool calls and agent runs

Shows how often each agent was activated and how many tools it invoked

Error rate

Shows the proportion of requests that resulted in failures or invalid outputs.

Guardrail and Azure Policy

Contents Safety

Jailbreak (1)

Risk type	Intervention point	Action
Jailbreak	User input	Block

1-1 of 1

< Prev Next >

Content safety (4)

Risk type	Intervention point	Action
Hate: Medium blocking	User input, Output	Block
Self-harm: Medium blocking	User input, Output	Block
Sexual: Medium blocking	User input, Output	Block
Violence: Medium blocking	User input, Output	Block

Protected materials (2)

Risk type	Intervention point	Action
Protected material for code	Output	Annotate
Protected material for text	Output	Block

Azure Policy

Enable logging by category group for Cognitive Service:	1.2.0
Configure Cognitive Services accounts to disable local a	1.0.0
Enable logging by category group for Cognitive Service:	1.1.0
Cognitive Services accounts should use customer owne	2.0.0
Configure Cognitive Services accounts to disable public	3.0.0
Configure Azure AI Search services to disable local auth	2.0.0
Enable logging by category group for Cognitive Service:	1.1.0
Azure AI Search services should have local authenticatio	1.0.1

Standards

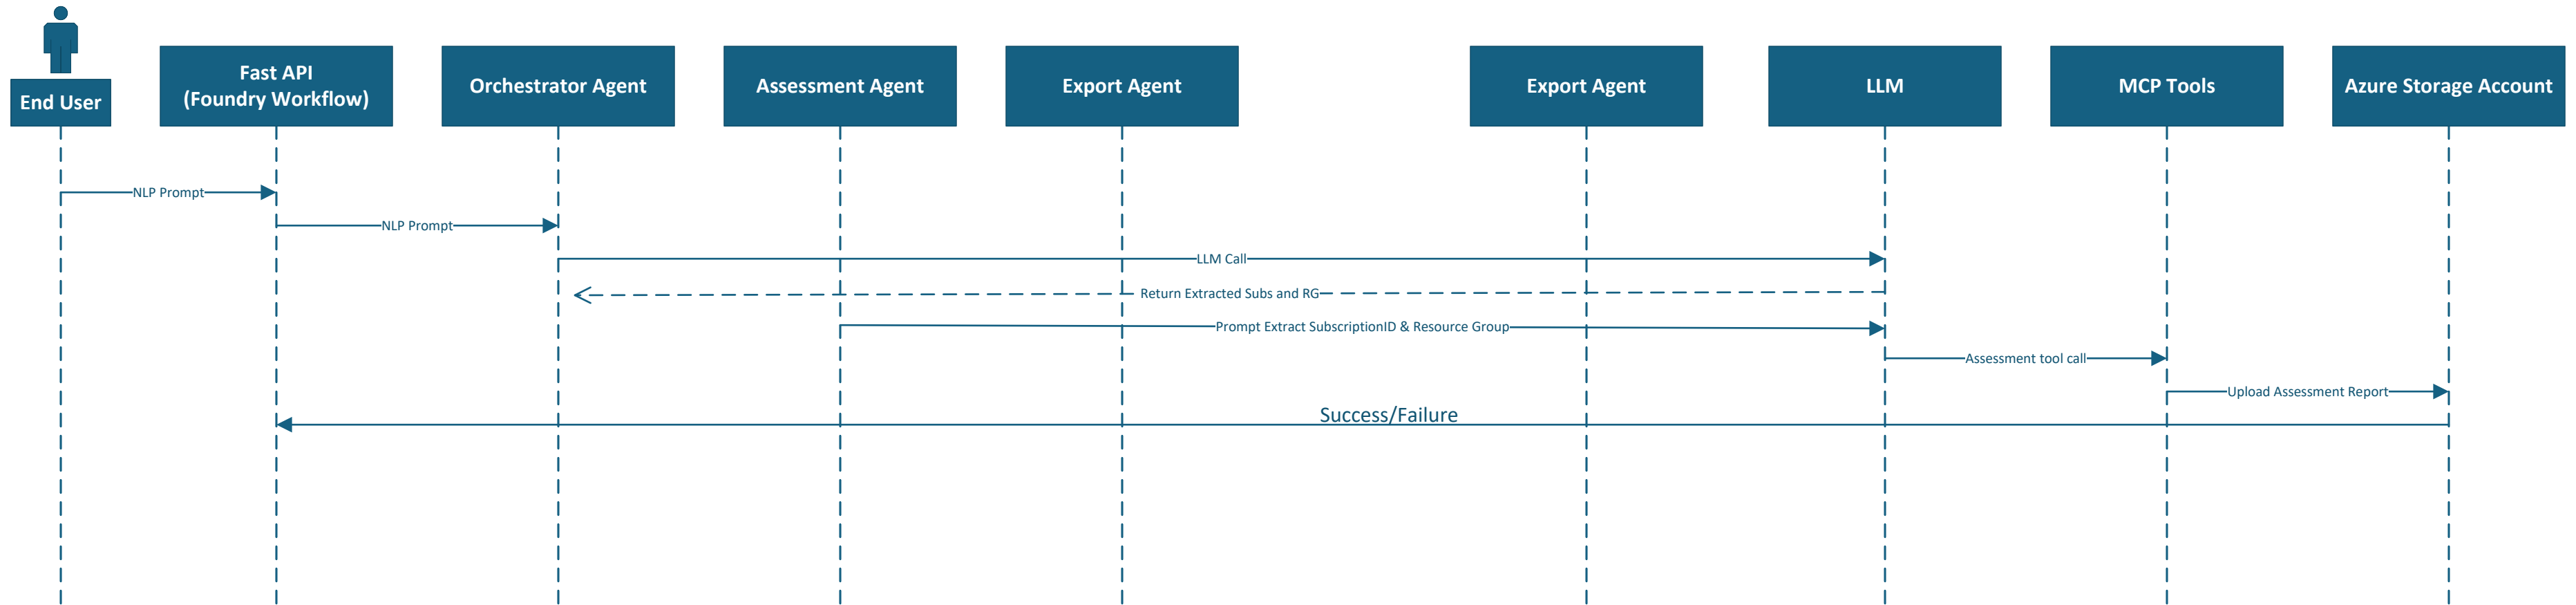

Recommendations

Security standards contain comprehensive sets of security recommendations to help secure your cloud environments.

Search

▼ Add filter

Name	Recommendations	Type	Assigned on	Status
Microsoft cloud security benchmark ⓘ	223	Default	Management Group	☒ On
NIST SP 800-171 Rev. 2 ⓘ	435	Compliance	-	☐ Off
CIS Controls v8.1 ⓘ	168	Compliance	-	☐ Off
CIS Microsoft Azure Foundations Benchmark v2.0.0 ⓘ	108	Compliance	-	☐ Off
EU AI Act 2024 1689 ⓘ	6	Compliance	Management Group	☒ On

The same sequence is being used for both the Export and the Code Refactor flows, but with different MCP tools, prompts, and agent instructions.
